

DRACO the Dragonator

The World's #1 Mechanical, Fire-Breathing Dragon

DRACO was conceived and created 5 years ago. He toured for a year in Japan, from the southern tip to the North. Afterward, DRACO was shipped to Australia, then through the Panama Canal, and finally to the USA—the Port of Miami – where he was rebuilt and redesigned, totaling \$150,000 in upgrades. Continuing his touring schedule, DRACO went back on the ship and toured parts of the Caribbean and South America – Aruba, Trinidad, Barbados, Panama, Caracas, Venezuela, Lima – Peru, and Bermuda, to name a few.

DRACO was now ready to invade the USA. Working in over 600 performances ranging from 3,000 seat events to 70,000 seat stadiums, DRACO traveled the US from coast to coast.

DRACO has been seen “LIVE” by over 3 million people. He is utilized in promotions, businesses, and in corporate displays. He has been featured at fairs, speedways, air shows, festivals – no show is too small or too large for DRACO.

DRACO also contributes to our communities by helping out the D.A.R.E. Program and Crime Stoppers -- “Taking a Bite out of Crime”, ripping and tearing into alleged drug houses.

DRACO is hauled down the road on a semi-tractor and trailer specially designed and built for DRACO. It's known as the DRAGON WAGON.

The man behind the scene, the handler and operator of DRACO, plus the driver of the Dragon Wagon, is Canadian Robbie Dawson. Known across North America as Flying Robbie, Dawson is a pioneer in Freestyle MotoCross Bike Jumping. Robbie was the first bike stunt man to use his 125cc bike to jump ramp-to-ground over monster trucks, up to 7 trucks at one time. But after a number of crashes that were close to fatal, and spending 8 months in the hospital and rehab, he retired from jumping. Robbie is now the DRAGON MAN.

“DRACO the DRAGONATOR is superior to any other mechanical creature in performance & total destruction. He will perform and do things NO OTHER MECHANICAL CREATURE CAN DO!”

DIMENSIONS

- a. Height: Approx. 35 feet (opened up)
- b. Width: Approx. 38 feet (includes custom body)
- c. Length: 45 feet plus, including tail and neck
- d. Weight: 42,000 pounds
- e. Lifts dead weight with his jaws --10,000 pounds straight up!
- f. DRACO's steel jaws have 60,000 pounds of crushing strength!

CHARACTERISTICS AND FEATURES OF THE DRAGONATOR

1. Mounted and built on a 1992 Excavator – Diesel Powered.
2. Moves on rubber tracks.
3. Has life-like movements of the neck and head.
4. Designed with a custom body, wings, tail, and head
5. “Dragonator Speaks” sound system featuring pre-recorded or custom “Live Interaction” dialogue.
6. DRACO is the only one who can carry a “Guest” Rider, who sits on top.
7. “Dragon Slime” (water) sprays the crowd from the mouth. DRACO, like other mechanical creatures also blows FIRE AND SMOKE from its mouth.
8. DRACO can lift a person with its jaws by a short cable hooked to a 5 point harness (hidden under bulk clothing) being worn by the person.
9. DRACO rips-apart cars, vans, and buses, and then finishes by rolling the vehicle into a ball with its JAWS OF STEEL.
10. DRACO's body is designed to spin completely around -- 360 degrees -- while standing in one spot OR while DRACO is moving, interacting with audience.
